1 Commitment to net zero

Finaffairs Consulting Ltd is committed to achieving net zero greenhouse gas emissions across its UK operations by 2050 at the latest. We will prioritise reductions in gross emissions from business travel, purchased energy and key suppliers. If residual emissions remain at the net zero date, we will report separately any removals used to neutralise them, together with the method and supporting evidence.

Reporting boundary

This plan covers the UK operations of Finaffairs Consulting Ltd, registered in England and Wales under company number 08324763. We use the operational control approach to define the reporting boundary. Operations in Nigeria, the United States and Canada fall outside this plan.

Baseline and current reporting year

Our first reporting period runs from 1 January to 31 December 2026. Once complete, it will serve as both our baseline and our first reporting year. We will use the baseline to track changes in annual greenhouse gas emissions. The period is still open and full-year figures are pending.

Emissions source	2026 baseline and reporting year (tCO_2e)
Scope 1 · Direct emissions	Pending
Scope 2 · Purchased energy, location-based	Pending
Scope 3 · Category 4 · Upstream transportation and distribution	Pending
Scope 3 · Category 5 · Waste generated in operations	Pending
Scope 3 · Category 6 · Business travel	Pending
Scope 3 · Category 7 · Employee commuting	Pending
Scope 3 · Category 9 · Downstream transportation and distribution	Pending
Scope 3 subtotal · Five categories	Pending
Total emissions · Scope 1, Scope 2 and the five Scope 3 categories	Pending

Pending entries do not represent zero emissions. Our classification of office energy will reflect operational control and the relevant premises arrangements. The completed inventory will explain material estimates and any sources assessed as zero or not applicable.

2 Emissions reduction targets and measures

Targets and progress

Our five-year planning horizon runs to 2031. We will publish an absolute emissions target for 2031, the equivalent percentage reduction from the 2026 baseline and interim milestones once the baseline and targets are confirmed. Future editions will show actual emissions alongside the baseline and track progress against the reduction trajectory.

Carbon reduction initiatives

Our Corporate Environmental Policy and Sustainable Procurement Policy set out commitments on resource use, business travel and supplier selection. We will publish the outcomes of specific measures as implementation and emissions savings can be evidenced.

Priority	Reduction measures
Business travel and client delivery	Use remote and hybrid delivery where suitable for consulting and Academy training. Combine site visits, prioritise rail over air where feasible and require a documented business case and approval for flights. Track travel emissions and the share of journeys by rail.
Premises and energy	Seek energy data from landlords, use energy-saving settings on equipment and consider lower-emission electricity where we control purchasing.
Suppliers and digital services	Seek environmental evidence from priority new and renewing suppliers, including cloud providers, venues and equipment suppliers. Reuse or repair serviceable equipment where practical.
Employee commuting	Use an annual commuting survey to understand travel patterns. Support flexible and hybrid working where the engagement permits.
Waste and equipment	Track office waste and recycling and use appropriate providers for the controlled disposal of electronic equipment.

Reporting, approval and publication

We will use the PPN 006 reporting structure, the GHG Protocol Corporate Standard and relevant Scope 3 guidance, and the UK Government's greenhouse gas conversion factors for the reporting year. The completed plan will include the emissions figures, the approved reduction targets, and the dates of board or equivalent approval and director sign-off.

We will make the completed plan available on our UK website and update it annually within six months of our 31 December financial year-end.
